**RAYLASE AG** presents a new generation of deflection heads at the LASER 2003 - World of Photonics

### **Be faster with SUPERSCAN**

The popular TURBOSCAN deflection head from RAYLASE AG has now got a faster brother. The company's own development department presents the RAYLASE SUPERSCAN at the Laser 2003 - World of Photonics. This represents a new generation of deflection heads with a much higher processing speed. This is approx. 40 % faster than deflection heads with the same aperture (TURBOSCAN). The hardware is in the familiar RAYLASE quality, compact and sturdy. The SUPERSCAN is available with beam diameters of 10 and 15 millimetres and is a profitable investment in itself. In combination with the SP-ICE control card and the software package Winlase Editor, even the most difficult of problems can be tackled and solved.

RAYLASE AG is a world-wide, trend-setting enterprise that develops modular components and assemblies to deflect and modulate laser beams and sells these internationally. Since its foundation in April 1999, RAYLASE has been facing the challenges in this field and supplying the market with innovative solutions. A global network of experienced specialists, external advisers, research and development facilities guarantee customers a range of products and services to the highest international standards.
